COVID-19 Information Avoidance Scale

Siebenhaar, Köther, & Alpers (2020) Universität Mannheim.

Information for researchers:

This scale was developed at the University of Mannheim. It is based on the Information Avoidance Scale by Howell & Shepperd (2016). Several items were adapted and added to make this instrument applicable to the COVID-19 pandemic.

Note that Item 2, 4, 6 and 9 are inverted. After inversion and summarizing all items, higher scores indicate more self-reported information avoidance on COVID-19 related issues.

When using this scale in non-commercial research, please make sure to cite it appropriately by referring to the following open access paper:
